Total trades (legs)	7,155
Weekly expiries traded	102

About the strategy

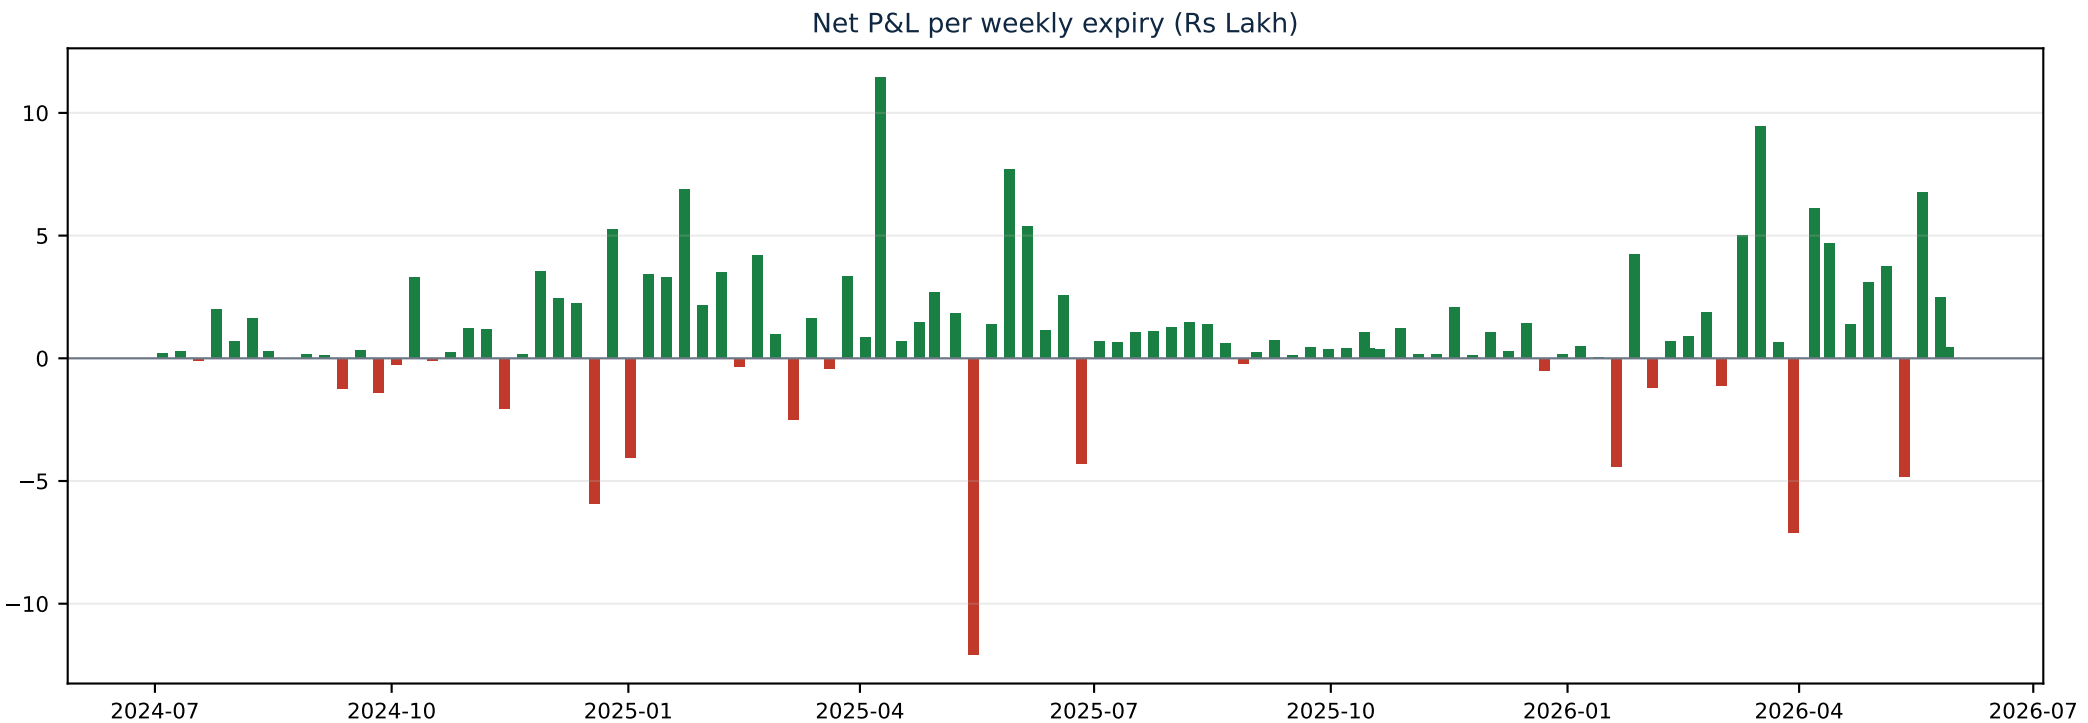

A fully systematic, rules-based options income strategy on NIFTY weekly options. It harvests option premium through the expiry cycle with continuous, automated position management and disciplined exits at expiry. Execution is 100% rule-driven (no discretion). Position sizing reflects the prevailing NIFTY lot size over the period (25 to 75 to 65, per SEBI revisions). Results are net of estimated brokerage, statutory charges and slippage.

Year-wise

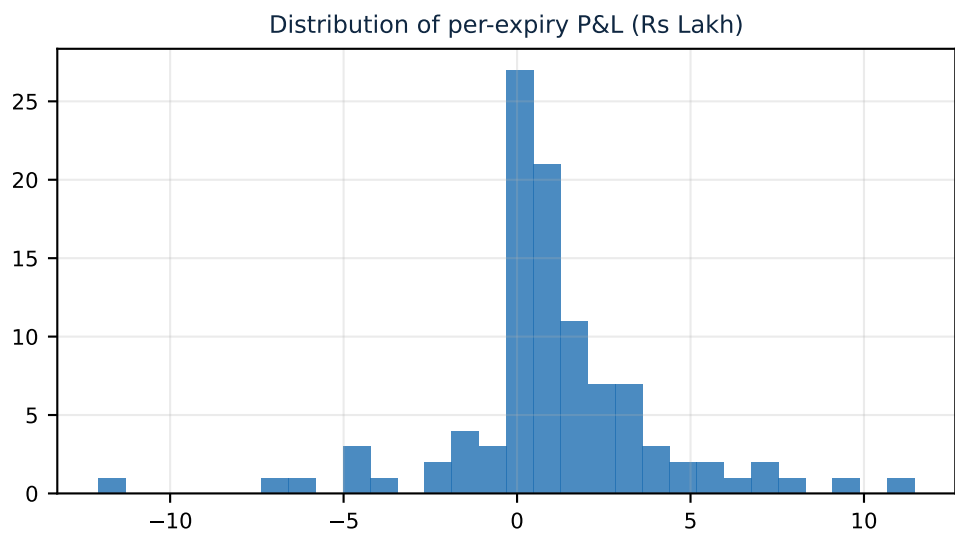

Year	Net P&L	Return on capital
2024	Rs 14.01 L	+3.4%
2025	Rs 61.77 L	+15.1%
2026	Rs 33.18 L	+8.1%

Sharpe ratio	2.32
Sortino ratio	2.17
Max drawdown	Rs -13.18 L
Worst single day	Rs -10.58 L

IMPORTANT DISCLOSURES. The performance shown is HYPOTHETICAL and derived from a historical SIMULATION (backtest) on 1-minute market data; it is NOT an actual trading record and no live capital was deployed. Hypothetical results have inherent limitations — they are prepared with the benefit of hindsight and do not reflect real-order liquidity, fills, or margin behaviour during stressed markets. Option selling carries the risk of large, sudden losses that can exceed the premium received. Margin and charges are estimates. Returns are regime-dependent and the test window may not represent future market conditions. PAST PERFORMANCE IS NOT INDICATIVE OF FUTURE RESULTS. This document is confidential, for information only, and is NOT investment advice or an offer to buy or sell any security. Prospective subscribers must assess suitability independently.
